

Press release, 2006-03-21

Projectplace.com strengthens its web based project tool – includes Netviewer web conference service

Projectplace.com today announced it has joined forces with the German company Netviewer that offers a combined web and VoIP conferencing service. During spring 2006 the Projectplace.com customers will be able to try Netviewer free of charge. From August the web conferencing service is expected to be included in Projectplace.com's standard offer. The two companies signed a collaboration agreement.

The web conferencing tool allows now both, synchronous and asynchronous communication within the web based project management service by Projectplace.com. Thanks to the new service two to ten people can now participate in a Projectplace.com web and VoIP conference and at the same time share information like project plans, protocols and other documents. Projectplace.com is already using Netviewer when educating its customers on how to use the tool.

– The introduction of a web conference service, coupled with Projectplace.com's long heritage of providing web-based software solutions that facilitate project planning, execution and delivery in customer oriented projects, positions us as the leading project tool provider in Europe, says Pelle Hjortblad, managing director at Projectplace International.

– This is a way for us to create a significant added value for our customers. They will get meeting room on line for up to ten participants what is open 24 hours a day, corresponding to a value of 159 euro per month, he continues.

The cooperation partners are top-players in the emerging collaboration market. Netviewer is the leading European supplier of web conferencing tools. More than 5000 multi-corporate enterprises and SMEs from over 30 countries make use this software. The company is located in Karlsruhe, Germany, with subsidiaries in France, Switzerland and USA.

– We are very pleased to start this collaboration with Projectplace.com. The project management service by Projectplace.com is a perfect and complementary environment for a tool like Netviewer, says Dr. Andreas Schweinbenz, CEO at Netviewer.

– According to our customer surveys, one of the main reasons for selecting a certain project tool is the availability of a web conference tool. By teaming up with Netviewer we strengthen our competitiveness considerably. This also gives us a better opportunity to create a more profound and long-term relationship with our customers, says Pelle Hjortblad.
